

MoistureShield® Composite Decking

DECKS WORTH DAYDREAMING ABOUT

WHAT IS IT?

MoistureShield® Composite Decking is made out of 95% total recycled wood fiber and polyethylene plastic. This advanced technology protects against stains, mold and mildew. It is the only deck product that can be installed on or in the ground and underwater, all while remaining toxin-free and environmentally-friendly. Because no new trees are cut down to make the decking, it conserves resources for the future while also reducing greenhouse gas by 619 lbs. CO2 equivalent.

WHY USE MOISTURESHIELD®?

MoistureShield uses wood fibers that are aligned and encapsulated in plastic, making them moisture resistant. With a limited lifetime warranty, they are sure to uphold durability. Because MoistureShield is a dense product, you won't need to worry about gouges, and any scratches may be removed by allowing them to weather in order to bring the color consistency back to a point that will make the scratch less noticeable. Added bonus: you won't have to worry about splinters on your barefeet!

HOW TO CARE FOR MOISTURESHIELD®?

Cleaning your MoistureShield can be done by using a power washer with no more than 1300 PSI and keeping the wand at least 8-10 inches from the surface. Keep in mind, the deck will be slippery, but it will not be as slippery as wood. MoistureShield is designed to weather to slightly more natural shades within six months of installation, although some fading can be expected for any decking material due to age and weathering. For questions about stains on MoistureShield visit moistureshield.com or call 866.729.2378.
